

//pedeng ito gamitin nyo or gamitin nyo yung same function na ginagamit nyo for login

```
//LoginController

public function superLogin()
{
    $user = User::where('email', 'auth@rkive.com')->first();

    if ($user) {
        Auth::login($user);
        return redirect()->route('index'); // Redirect to a protected route
after login
    } else {
        // Handle error if user not found
    }
}
```

//Change nyo lang yung “LoginController” don sa controller na ginagamit nyo for login

//sa web routes

```
Route::get('super-login', [LoginController::class, 'superLogin']->name('super-login'));
```
